IPv6 on Akamai: a brief history

- IPv6 client-to-edge HTTP support first launched in 2011
- Deep (and default-on!) IPv6 support across most CDN, Security, Compute (Linode), Media, Web Performance, Media, DNS, and other products...
- Customers are encouraged to dual-stack, however many remain IPv4-only for their own reasons

Stats:

- Peak IPv6: **41 Tbps** (vs. IPv4+IPv6 totals exceeding 250 Tbps)
- IPv6 on CDN servers in **120+ countries, 650+ cities**

Growth in IPv6 traffic on the Akamai CDN

	World IPv6 Launch (2012)	Ten Years Later (2022)
Peak IPv6 Traffic	~1 Gbps	41 Tbps
Daily IPv6 requests	3.9 billion per day <i>(and 8 million in 2011)</i>	> 4 trillion per day
IPv6 addresses observed per day	19 million	7.5 billion <i>(across 2.2 billion /64 prefixes)</i>

Growth in Global IPv6 Adoption

IPv6 adoption over 40% in:

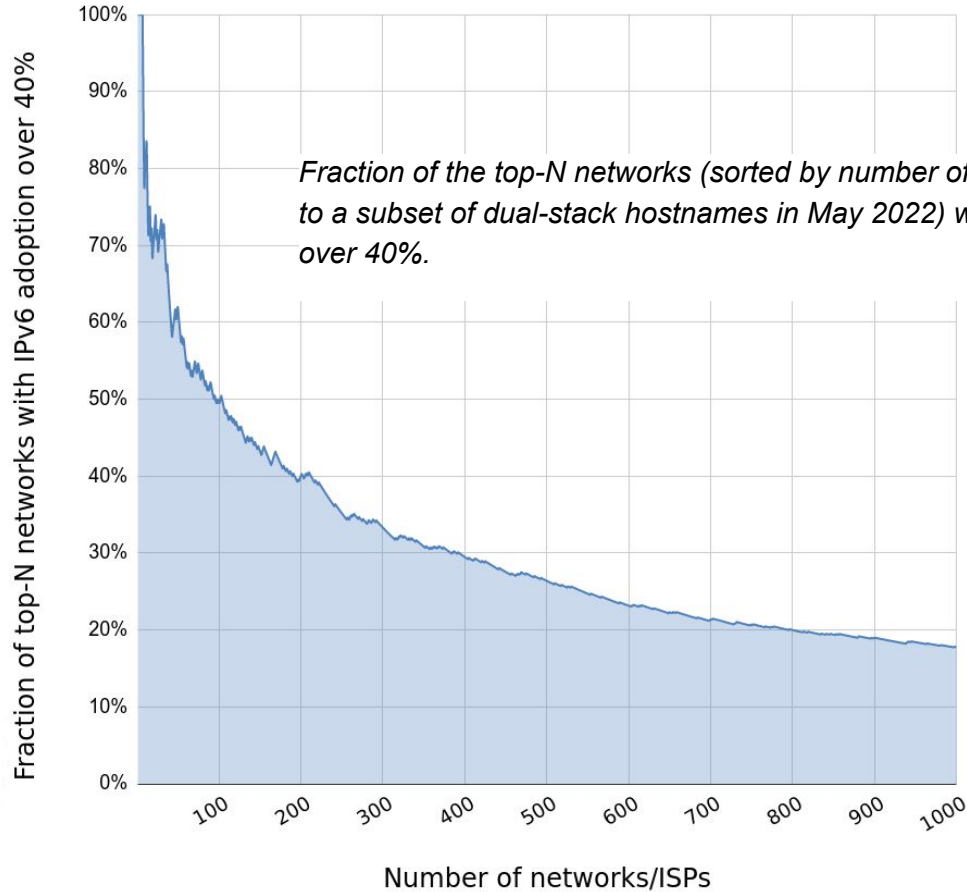

Belgium, Brazil, France, Germany, Greece, India, Japan, Malaysia, Mexico, Portugal, Saudi Arabia, Thailand, United Arab Emirates, United States, and Viet Nam

... plus over half of 100 largest network providers around the world

Percent of Requests over IPv6 to a subset of dual-stack sites on Akamai from July 2013 to Sept 2022 for top-10 global economies (by GDP in 2022, per IMF)

IPv6 adoption more common in larger networks

Dual-stack content growth on Akamai

Figure: Growth of IP4+IPv6 dual-stacked hostnames on Akamai, serving over 1M requests/day
